Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Mean 9.835; Variance 4.583; scale 2.146

Statistics: Mean 8.055; Variance 4.678; scale 1.722

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            밁
                                                                                                  The present cDNA sequence codes for a claimed single-chain antibody, it designated e23(FV), which binds to erbB-2. Monoclonal antibody e23 was generated by immunising mice with NyerbB-2 cells overexpressing the gpl85 protein, removing spleen cells and producing hybridomas in the protein premoving spleen cells and producing hybridomas by standard techniques. Messenger RNA coding for the anti-erbB-2 monoclonal antibody was isolated and converted to cDNA. Regions coding for the heavy- and light- chain variable regions were then amplified by PCR and joined via a sequence encoding a peptide diagnosis of tumour cells which overexpress the erbB-2 gpl85 marker, e.g. breast, ovarian and non-small cell lung carcinomas, and, when coupled to a cytotoxic agent, to treat such tumours. So Sequence 711 BP; 175 A; 182 C; 189 G; 164 T;

A nucleac acid comprises a first sequence encoding a signal peptide (R94019) linked to a second sequence (T17728) encoding a single chain Fv fragment (R94020) that binds a human erbB2 oncoprotein. The anti-erbB2 sFv portion is obtained by PCR using e23scFv plasmid as template. The signal peptide directs the scFv to the endoplasmic reticulum. The nucleic acid is incorporated into a plasmid or viral vector to facilitate expression of the scFv antibody homologue within e.g. an epithelial carcinoma cell. Intracellular

It was obtained by PCR amplification (see T79897-98) of BC2 cDNA and insertion of the PCR product into F9HZHC 1-3 cDNA (see T77374). Claimed anti-Factor IX chimeric antibodies are useful in the treatment of thrombosis.

Example 5; Page 64; 150pp; English.

This cDNA sequence encodes the light chain variable region (see C W24520) of mouse anti-human Factor IX monoclonal antibody BC2.

Claimed humanised antibodies (see W24510-18) contain CDRs (see W245104-09) of BC2 heavy and light chains inserted into framework regions of selected human antibody sequences. They have self-limiting neutralising activity, and are useful as anticoagulant agents in treatment of thrombosis associated with myocardial infarction, unstable angina, atrial fibrillation, stroke, renal camage, pulmonary embolism, deep vein thrombosis, percutaneous transluminal coronary angioplasty, disseminated intravascular coagulation, sepsis, or artificial organs, shunts or prostheses (claimed). Also claimed are chimeric antibodies (see T79900), and Fab and F(ab')2 fragments. The claimed antibodies (see T79900), and provide only partial inhibition of coagulation.

                                                                                                                                                                                                                                                                                                                                                                                                                         N70972;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             VL region. The PCR product was ligated into ScaI, NarI-digested F9HZHC 1-3 (see T77374) and digested with ScaI, NarI to produce a mouse-human chimeric light chain F9CHLC (see T79900, W24532). Claimed anti-Pactor IX chimeric antibodies are useful in the treatment of thrombosis.

                                                                                                                                                                                                                                                                                                                                                                                                                      The patentors claim a chimeric antibody molecule comprising 2 lig chains and 2 heavy chains, each comprising a constant human region and a variable non-human region. Coding sequences for the Ig chains are also claimed. The invention provides consensus sequences of light and heavy chain J regions useful in the design of oligonucleotides (UIGS) for use as primers or probes for cloning immunoglobulinlight or heavy chain mRNAs or genes. Depending on nature of design of a particular UIC, it may be capable of hybridizing to all Ig mRNAs or genes containing a single specific sequence. UIG denotes universal immunoglobulin gene. The antibodies useful in passive immunisation avoiding negative reactions. They are also useful in assaying and in vitro imaging.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      This sequence represents the coding sequence for the light chain variable region of the 2H7 mouse monoclonal antibody. The 2H7 antibody recognises the human B-cell surface antigen Bp35, which plays a role in B-cell cativation. This sequence was used in a human-mouse chimeric antibody with human B-cell antigen specificity, that was produced using the method of the invention. The method of the invention is for the production of a protein in a Gram-negative bacterium. The method improves on current cetchniques, by using a vector including DNA encoding the pectate lyase continuously sequence (see T51034), attached to the sequence encoding the production. The method is especially used to make continuously contains (1g), particularly those with a human constant region, suitable for passive immunisation (without risk of serum sickness or canaphylaxis) or for in vivo/in vitro diagnosis and imaging. The Ig may calso be used therapeutically, optionally coupled to toxins, etc.

CC Alternatively the protein to be produced is the sweetener thaumatin. The presence of this signal sequence means that the protein is exported from the cytoplasm and can be recovered from the culture medium or periplasm, in active and correctly folded form. The method allows the class of any cantibody to be switched, e.g. most human-human Ig are of M class, easily creduced and aggregated, and these can now be changed to G, A or E
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Query Match

CC The present sequence encodes the light chain variable region of CC the 2H7 antibody. The 2H7 cDNA was used in the preparation of CC molecule comprises 2 DNA sequences encoding an Ig fragment. The DNA CC molecule comprises 2 DNA sequences encoding 2 pectate lysse secretion signal sequences respectively linked to a DNA sequence CC encoding an Ig Fd molecule or Ig light chain, operably linked to a Single prokaryotic promoter so as to form a dicistronic transcription unit, provided that the Ig fragment can bind an antigen and is produced and secreted by an E. coli host cell when CC the nucleic acid molecule is expressed in the host cell when CC manifyen and independent encourage of the production of recombinant antibodies, which can be used for passive immunisation CC without negative immune reactions (e.g. serum sickness and anaphylactic shock), in labelled forms as immunoassay or imaging CC reagents, in complement mediated lysis and for therapeutic purposes when coupled to a toxin or other therapeutic agent.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Secretable immunoglobulin heavy and light chain fragments - capabl of assembling into chimeric antibodies, useful for e.g. passive immunisation, diagnosis, etc example 4; Fig 22; 96pp; English.

A cDNA clone (770869) codes for the light chain variable region (W16344) of the 2H7 mouse monoclonal antibody, which recognises human B-cell surface antigen B935. The sequence was isolated from a 2H7 cell line cDNA library by PCR amplification. The 2H7 heavy chain variable sequence (T60868) has also been isolated. The sequences have been used to construct a human-mouse chimaeric antibody with specificity for the human B-cell antigen. Sequence 426 BP; 100 A; 135 C; 93 G; 98 T;
                                                                                                                                                                                         01-JUN-1998 (first entry)
Mouse 2H7 antibody light chain variable region cDNA.
Mouse; murine; light chain; variable region;
immunoglobulin fragment production; Ig fragment production; of the production of the p

                                                                                                        B
                                                                                                                                                                                                                                                                                                                                                                                                                                    cencoling: (a) pectate lyase secretion signal sequence operably can ly fd molecule; and (b) pectate lyase secretion signal sequence operably inked to a DNA sequence encoding at least the variable region of coperably linked to a DNA sequence encoding at least the variable region of an Ig light chain, where (a) and (b) are operably linked to a single prokaryotic promoter to form a dicistronic crasscription unit. The method is used to produce chimeric Fab conclecules, e.g. derived from murine monoclonal antibody 2H7 raised accomptant human B-cell surface antigen. The invention provides a convel approach for producing genetically engineered antibodies of desired variable region specificity and constant region croperties. The cloned Ig gene products can be produced by expression in genetically engineered organisms. The application of specific Ig chains in various organisms provides an effective concordinal antibodies. The invention also provides a solution to the problem of class switching antibody molecules.

Example IV; Fig 22; 98pp; English.
The present sequence was used in the development of a novel method for the production of an immunoglobulin (Ig) fragment capable of binding an antigen. The method comprises culturing an E. coli host that has been transformed with a nucleic acid molecule encoding the Ig fragment, under conditions so that the Ig fragment is produced and secreted. The nucleic acid molecule comprises DNA sequences
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Wall R, Wilcox GL; WPI; 98-031749/03.

                                                                                                                                                                                                                                                                                                 PT DNA encoding secretable immunoglobulin fragments - comprising at PT DNA encoding secretable regions of light or heavy chains PS Example IV; Fig 22; 98pp; English.

CC The present sequence was used in the development of a novel method CC for the production of an immunoglobulin (Ig) fragment capable of CC binding an antigen. The method comprises culturing an E. coli host that has been transformed with a nucleic acid molecule encoding the CC Ig fragment, under conditions so that the Ig fragment is produced CC and secreted. The nucleic acid molecule comprises DNA sequences CC encoding: (a) pectate lyase secretion signal sequence operably CC linked to a DNA sequence encoding at least the variable region of CC an Ig Fd molecule; and (b) pectate lyase secretion signal sequence coperably linked to a DNA sequence encoding at least the variable region of an Ig light chain, where (a) and (b) are operably linked CC to a single prokaryotic promoter to form a dicistronic CC transcription unit. The method is used to produce chimeric Fab CC molecules, e.g. derived from murine monoclonal antibody 2H7 raised against human B-cell surface antigen. The invention provides a cc compression in genetically engineered antibodies of CC desired variable region specificity and constant region produced by expression in genetically engineered antibodies of CC expression in genetically engineered antibodies of CC expression in entibodies, recombinant DNA cloning and production of CC specific Ig chains in various organisms provides an effective consolonal antibodies. The invention also provides a solution to CC the problem of class switching antibody molecules.

                                                                                                                                                         If fragment, under conditions so that the Ig fragment is produced and secreted. The nucleic acid molecule comprises DNA sequences conditions in the sequence operably continued to a DNA sequence encoding at least the variable region of an Ig Fd molecule; and (b) pectate lyase secretion signal sequence coperably linked to a DNA sequence encoding at least the variable region of an Ig light chain, where (a) and (b) are operably linked to a DNA sequence encoding at least the variable composed to a single prokaryotic promoter to form a dicistronic consist the contract of the method is used to produce chimeric Fab composed and the sequence monoclonal antibodies of composed approach for producing genetically engineered antibodies of composed approach for producing genetically engineered antibodies of composed approach for producing genetically engineered organisms. The application of composed spring in genetically engineered organisms. The application of specific Ig chains in various organisms provides an effective composition for the efficient large scale production of human continues of composition of the efficient large scale production of human continues of composition of the efficient large scale productes.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      QΥ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         밁
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Qy
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Better M, Horwitz A, Wall R, Wilcox GL; WPI; 98-051487/05.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                molecule and light chain

Example IV; Fig 22; 98pp; English.

Example IV; Fig 22; 98pp; English.

The present sequence was used in the development of a novel method for the production of an immunoglobulin (Ig) fragment capable of binding an antigen. The method comprises culturing an E. coli host that has been transformed with a nucleic acid molecule encoding the lig fragment, under conditions so that the Ig fragment is produced
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            V18594 standard;
